

[Finally call it Quits with Avprin](#)

Smoking Cessation Explanation

More than 20% of the population smokes – that's more than 1 in every 5 people. What's more, almost half of those people tried to quit smoking last year and failed. It typically takes 2, 3 or even more tries to quit before you actually succeed. Each time you try you make progress.

Smoking is known to cause at least 20 potentially fatal diseases. These affect you directly every time you light up, but they can also affect a loved one who inhales your second hand smoke, which contains over 4,000 chemicals. Many of these chemicals are also found in wood varnish, insect and rodent poison, arsenic and nail polish remover.

Symptoms of Smoking Cessation

Side effects of smoking:

- Harm to every organ in your body caused by the ingestion and inhalation of ash, tar, gases, and other poisons every time you light up
- Exponentially increased risk for mouth, lung and other cancers
- Damage to your heart and lungs that directly affects your health
- Difficulty tasting and smelling
- Difficulty fighting off regular infections like cold and flu
- Wastes hundreds of dollars a month that could be spent on any thing else you enjoy or want

If you'd quit smoking last week, already you would have:

- Lowered your blood pressure and heart rate
- Normalized carbon monoxide and oxygen levels in your blood
- Decreased your chances of having a heart attack
- Improved your sense of taste and smell
- Increased your lung capacity
- Made your breathing easier
- Improved your circulation and the quality of blood circulating through your body
- Began the process of your lungs cleaning and restoring themselves
- Reduced your coughing
- Increased your energy
- Saved yourself anywhere from \$25 to \$100 or more

What is Avprin?

Avprin is a homeopathic, FDA-registered drug that symptomatically treats addiction to cigarettes.

Avprin is the only product of its kind, available without a prescription, that directly addresses the affects of nicotine addiction and withdrawal, from the inside out. And Avprin enables you to do it without gaining weight.

Avprin is the result of numerous medical studies that have proven its effectiveness, so much so that it has been entered into the US Homeopathic Pharmacopoeia and is an FDA-registered drug.

How Avprin Works

Avprin is a homeopathic drug registered with the FDA, the original, 100% natural alternative for symptomatic treatment of addiction to cigarettes. It helps you cope with the emotional roller coaster, anxiety and cravings so common with trying to quit – and keeps you from gaining weight.

Avprin is powerful. The active ingredients in many drugs are often destroyed in the liver or stomach before given a chance to reach their intended target. Homeopathic drugs, like Avprin, work differently. This insures the full strength of the medicine is available when it is needed to fight the addiction to cigarettes.

Homeopathic medicine has been used for many years as a safe and effective means of treating ailments naturally without a prescription. It is a pharmaceutical science based on the theory of treating certain conditions with very small diluted doses of similar natural substances.

Product Type: **Capsule (Step One)**

Bottle Description: White round pharmaceutical

Capsule Count: **90**

Directions: Take one capsule with breakfast, lunch, and dinner, or as directed by a healthcare practitioner.

WARNINGS: If you have any illnesses, are pregnant, nursing, or are taking medication, please contact your healthcare professional before using this product. Frequently Asked Questions

Q: What if it doesn't work?

A: Not everything works for everybody; we realize that. But we are so confident in our Avprin™ Anti-Smoking Kit, we support its success 100% by offering a one year money-back guarantee. You have the full year to return this product for the full refund, minus shipping and handling. Our refund policy is a step above the rest. If you decide Avprin™ isn't working for you, simply return the product and receive a refund within 7-14 business days of receipt. If you try our product and it doesn't work for you, we refund everything except the shipping charge.

Q: I am pregnant, can I use Avprin™

A: Although there are no results from any test or study that show dangers of using the product while pregnant, it is the policy of Selmedica Healthcare to recommend that women who are pregnant or nursing not use the product until breastfeeding has ceased.

Q: I do not need to lose any weight; will Avprin™ still work for me

A: Yes, it doesn't matter if you don't have any weight to lose, or if you have 200lbs to lose, Avprin™ can work for you. Avprin™ is designed to help rid your body and mind of your desire to smoke. The weight loss formula is designed to prevent you from gaining weight while quitting smoking, without any added stress. If you are not interested in taking the Avprin™ weight loss supplementary (Zetacap™), you do not have to. Most people do use the supplementary, to prevent any unwanted weight gain. The beauty of the Avprin™ weight loss formula is that you can adjust your serving to meet your desired level.

Q: What are the long-term benefits of stopping smoking?

A: People who quit smoking live longer than those who continue to smoke. 10 to 15 years after quitting, a previous tobacco user's risk of premature death approaches that of a person who has never smoked. About 10 years after quitting, an ex-smoker's risk of dying from lung cancer is 30 to 50 percent less than the risk for those who continue to smoke. Women who stop smoking before becoming pregnant or in the first trimester can reverse the risk of low birth weight for the baby and reduce other pregnancy-associated risks. Quitting also reduces the risk of other smoking-related diseases, including heart disease and chronic lung disease.

Q: What are some of the difficulties associated with quitting smoking?

A: Quitting smoking may cause short-term after-effects, especially for those who have smoked a large number of cigarettes for a long period of time. People who quit smoking are likely to feel anxious, irritable, hungry, more tired, and have difficulty sleeping. They may also have difficulty concentrating. Many tobacco users gain weight when they quit, but Nicozan™ has helped to eliminate that problem with its weight loss additive. These changes do subside. People who kick the habit are living proof.

Q: What about nicotine patches and gum? Why trade one addiction for another?

A: The main reason for smoking addiction is nicotine itself. Nicozan™ is designed to free you of nicotine addiction, not to help in continuing it.

Q: Does my risk for developing cancer change after I quit smoking?

A: Quitting smoking reduces the risk for developing cancer, and this benefit increases the longer the person remains "smoke free." People who quit smoking reduce their risk of developing and dying from lung cancer. They also reduce their risk of other types of cancer. The risk of premature death and the chance of developing cancer due to cigarettes depend on the number of years of smoking, the number of cigarettes smoked per day, the age at which smoking began, and the presence or absence of illness at the time of quitting. For people who have already developed cancer, quitting smoking reduces the risk of developing another primary cancer.

Q: At what age is quitting smoking the most beneficial?

A: Quitting smoking benefits men and women at any age. Some older adults may not perceive the benefits of quitting smoking; however, smokers who quit before age 50 have half the risk of dying in the next 16 years compared with people who continue to smoke. By age 64, their overall chance of dying is similar to that of people the same age who have never smoked. Older adults who quit smoking also have a reduced risk of dying from coronary heart disease and lung cancer. In addition, immediate benefits (such as improved circulation, and increased energy and breathing capacity) are other good reasons for older adults to become smoke free.
