

How does [Puricil](#) help your Gout ?

Gout Explanation

Gout is a systemic disease, a condition that occurs throughout the body, caused by the buildup of uric acid in the joints. An elevated blood level of uric acid called hyperuricemia occurs when the liver produces more uric acid than the body can excrete in the urine, or when a diet high in rich foods, like red meat, cream sauces, red wine, produces more uric acid than the kidneys can filter from the blood. Whether a result of your body producing too much uric acid or its inability to get rid of high levels, the uric acid builds up and creates sharp, needle-like crystals that form around your joints and cause the excruciating pain you feel.

Symptoms of Gout

You have dull aches or stiffness in your joints, including the large joint of your big toe, feet, ankles, knees, hands, or wrists. You have pain and tenderness when you move, no matter how carefully you try to get around. Fatigue. You experience swelling, redness, or warmth in your affected joints for no explainable reason.

What is Puricil?

Puricil is the only product of its kind specifically designed to work from underneath to lower uric acid build up, getting rid of excess uric acid, and attacking the pain, swelling, and stiffness once and for all. Puricil's ingredients are specifically formulated to attack the symptoms of gout at its core to provide relief.

How Puricil Works

Each of the active ingredients in Puricil, a medical food, have been proven to help manage symptoms of gout. Medical foods have been prescribed by physicians when a patient has special nutrient needs in order to manage a disease or health condition.

The ingredients in Puricil are designed to attack gout symptoms from the inside out. This means that, unlike other gout medications, the ingredients in **Puricil are designed to** attack your gout symptoms from every direction and every angle.

Frequently Asked Questions

Q: Can gout lead to more serious problems?

A: Yes, it can. If left untreated, gout could hinder your ability to walk or use other parts of your body.

Q: Does Puricil have any side effects?

A: There have been no reported side effects to Puricil.

Q: Should Puricil be taken with food or on an empty stomach?

A: Puricil can be taken before, with, or between meals. Food does not affect the effectiveness of Puricil.
